## 1. Introduction

The Gladstone Ports Corporation Limited (GPC) undertook the dredging component of the Clinton Vessel Interaction Project (CVIP) between March and August 2020 by performing capital dredging to widen the Clinton Channel. The project involved dredging approximately 800,000 m<sup>3</sup> of material to deepen and widen the existing Clinton Channel and dispose of the dredged material in the existing Western Basin Reclamation Area (WBRA). The project also included the relocation of two navigational aids.

This project was implemented to minimize the risk of vessel interaction in the Port of Gladstone. The passing of Cape size vessels departing from the Wiggins Island Coal Terminal (WICT) through the Clinton Bypass Channel in close proximity to vessels moored at RG Tanna Coal Terminal (RGCT) resulted in forces imposed on the moored vessels due to the displacement of water. These forces may have been sufficient to break mooring lines and in the extreme, have the vessel fully break away from the berth. A break away may be sufficient to result in vessel collisions either between the interacting vessels or with other vessels moored in the adjoining berths. A significant failure of this nature could result in major incident with economic and environmental consequences. A range of dredging and non-dredging options was examined before arriving at the preferred solution.

State approval (Environmental Authority) to conduct the project was obtained by GPC in March 2019 followed by the Federal approval (EPBC Approval) in July 2019.

Dredging operations for the project commenced on 5 March 2020 and was undertaken by Hall Contracting Ltd. A backhoe dredge “Woomera” (BA900 backacter with 1900kW installed power) was used for the dredging operations. The following equipment supported the Woomera:

- 2 large tugboats
- 1 to 2 smaller tugboats
- 3 to 4 flat hopper barges
- Survey vessel
- Crew transfer vessel
- Unloading pontoon

A temporary unloading pontoon was installed on the eastern side of the WBRA. All dredged material were unloaded by means of excavators (positioned on the hopper barges) into dump trucks, positioned on the unloading pontoon. The unloading pontoon was connected to the shore via a ramp, allowing for the transit of dump trucks on/off the pontoon. Dredged material was placed in WBRA. No tail water discharge occurred during the dredging operations.

The dredging operations ended on 27 August 2020.

Two Navigational Aids were removed prior to the commencement of the dredging operations between 20 and 31 January 2020. Reinstallation of the navigational aids was completed by 13 September 2020.

The Environmental Authority for CVIP was surrendered to the Department of Environment and Science (DES) on 8 March 2021.

The project was regulated through adherence to the conditions of the Approvals and the Environmental Management Plans of GPC and Hall Contracting. Regular environmental inspections were conducted during the project in addition to two (2) third party audits. All observations from the inspections and the audits were closed prior to completion of the project.

GPC commissioned a review of the environmental performance of the project by an independent expert post-completion of the project. This review concluded:

*The results of the CVIP monitoring program have demonstrated that:*

- *The dredging activities did not adversely affect the Outstanding Universal Value(s) of the Great Barrier Reef World Heritage Area (GBRWHA);*
- *There were no significant long-term changes in the health of (and no net loss of) high ecological value sensitive receptors such as seagrass meadows and reefs;*
- *Scheduled Water Quality Objectives (WQOs) were met in order to sustain the particular environmental value(s) that they support;*
- *Appropriate marine ecological condition monitoring was undertaken in accordance with the Monitoring Procedure to inform adaptive management actions and control measures to minimise or avoid impacts to marine ecological components, processes and services;*
- *Direct impacts were confined to the dredge-loading site (dredged footprint), and that impacts outside of the lawful footprint were small-scale and temporary.*

*In addition, the replacement of two navigational aids was completed successfully without any significant impact on the environment, owing to the implementation of relevant management measures and application of appropriate caution and care.*

*The various studies and monitoring activities for the CVIP project were generally of a high quality and were conducted by capable and respected institutions, adopting relevant national and international best practices and performance standards. There has been a significant level of transparency in the project, including substantial community and stakeholder engagement and online data sharing.*

## **2. Objective**

This report is the third report (for the currency period April 2023 to March 2024) prepared to address Condition 13 of the EPBC Approval 2017/7976, which states:

*The approval holder must prepare a compliance report for each 12-month period following the date of commencement of the action, until completion of the action, or as otherwise agreed to in writing by the Minister.*

## **3. Activities in the current reporting Period**

Activities that occurred in the current reporting period:

- Approval of the CVIP Fine Sediment Offset Plan on 19 November 2023

→ Extension of the Approval 2017/7976 until 30 June 2036

Section 4 (Compliance Summary) provides details of compliance with each condition of the Federal approval.

A partial compliance issue was identified against condition 11b:

*publish the OP on the website within 20 business days of the date the OP is approved by the Minister, or of the date a revised OP is submitted to the Minister, unless otherwise agreed to in writing by the Minister;*

The plan was approved by the Minister on 19 November 2023. The approved plan was published on the GPC website on 2 January 2024.

## 4. Compliance Summary

**Approval – Decision on Controlled Action EPBC 2017/7976 (original date of decision: 15 July 2019, Date of Variation No. 1: 21 January 2021, Date of Variation 02- 20 November 2023-Validity of approval: 30 June 2026)**

Compliance with conditions for 2021, 2022 and 2023 are referenced in the following Annual Compliance Reports:

- [CVIP-Annual-Compliance-Report-April-2021.pdf](#)
- [Env CVIP EPBC 2017-7976 Annual Compliance Report April 2022.pdf](#)

**Compliance Rating Y: Compliant; NA: Not applicable to the current Reporting Period. PC: Partially compliant**

| Condition No. | Requirement   | Compliance Comments-(2023-2024)  | Compliance Rating |
|---------------|---|--|-------------------|
| 1             | For the protection of protected matters, the approval holder must ensure that:  |  |                   |
| 1a            | Capital dredging does not occur outside the Clinton channel widening footprint and the Western Basin Reclamation Area shown at Attachment A;  | Not applicable to the current reporting period as dredging was completed in August 2020. | NA                |
| 1b            | No more than 800,000 cubic metres of capital dredge material is removed;  | Not applicable to the current reporting period as dredging was completed in August 2020. | NA                |
| 1c            | Capital dredge material is only disposed of within the Western Basin Reclamation Area shown at Attachment A;  | Not applicable to the current reporting period as dredging was completed in August 2020. | NA                |
| 1d            | There is no uncontrolled release from the Western Basin Reclamation Area of placed capital dredge material; and   | Not applicable to the current reporting period as dredging was completed in August 2020. | NA                |
| 1e            | Ensure that dredging activities do not result in the Benthic Photosynthetically Active Radiation level being less than 6 mol photons m <sup>-2</sup> day <sup>-1</sup> at the seagrass canopy depth for more than 28 consecutive days at any of the seagrass meadow water quality | Not applicable to the current reporting period as dredging was completed in August 2020. | NA                |

| Condition No. | Requirement   | Compliance Comments-(2023-2024)   | Compliance Rating |
|---------------|---|---|-------------------|
|               | monitoring sites shown (as CVIP BPAR sites) in Attachment A.  |   |                   |
| 2             | The approval holder must:   |   |                   |
| 2a            | Implement the approved Fine-grained Sediment Validation Monitoring Plan; and  | <ul style="list-style-type: none"> <li>• Not applicable to the current reporting period.</li> <li>• An approved fine-grained sediment validation monitoring plan was implemented during dredging</li> </ul> | NA                |
| 2b            | Publish the Fine-grained Sediment Validation Monitoring Plan on the website within 20 business days of the date of this approval decision.  | Not applicable to the current reporting period.   | NA                |
| 3             | If the approval holder revises the <b>Dredge Management Plan</b> approved under the approval holder's state Environmental Authority EA000168:   |   |                   |
| 3a            | Any revision must not result in a new or increased impact; and  | <ul style="list-style-type: none"> <li>• Not applicable to the current reporting period.</li> <li>•</li> </ul>  | NA                |
| 3b            | Within five (5) business days of the revised plan being approved by the State Government, the approval holder must provide to the Department an electronic copy of the revised Dredge Management Plan with all changes from the previous version marked in track changes mode, evidence that the revised plan is published on the website and an explanation as to why implementation of the revised plan will not result in a new or increased impact. | Not applicable to the current reporting period.   | NA                |
| 4             | Within 20 business days after the completion of capital dredging, the approval holder must notify the Department of the actual date of completion of capital dredging.  | Not applicable to the current reporting period.   | NA                |
| 5             | The approval holder must submit a Dredging Completion Report (DCR) to the Department within six (6) months of the completion of   | Not relevant to the current reporting period.   | NA                |

| Condition No. | Requirement   | Compliance Comments-(2023-2024)  | Compliance Rating |
|---------------|---|--|-------------------|
|               | <b>capital dredging.</b> The OCR must include, but is not limited to:   |  |                   |
| 5a            | The amount of fine-grained sediment returned to the marine environment that was not available for resuspension before commencement of the action, calculated and validated in accordance with the Fine-grained Sediment Validation Monitoring Plan;   | Not relevant to the current reporting period   | NA                |
| 5b            | The amount of fine-grained sediment returned to the marine environment that was available for resuspension before commencement of the action, calculated and validated in accordance with the Fine-grained Sediment Validation Monitoring Plan; and   | Not relevant to the current reporting period   | NA                |
| 5c            | An assessment of the effectiveness of the methods specified in the Fine-grained Sediment Validation Monitoring Plan for monitoring and measuring fine-grained sediment during dredging activities for validating the fine-grained sediment release modelling.   | Not relevant to the current reporting period   | NA                |
| 6             | To compensate for residual significant impacts of the action and to achieve a net benefit to the outstanding universal value of the Great Barrier Reef World Heritage Area, the approval holder must provide offsets for the amount of fine-grained sediment returned to the marine environment that was not previously available for resuspension before commencement of the dredging activities, calculated in accordance with the Fine-grained Sediment Validation Monitoring Plan | A Fine Grained Sediment Offset Plan was approved by DCCEEW on 19 November 2023   | Y                 |
| 7             | The approval holder must submit an Offset Plan (OP) to the Minister for approval by 31 January 2022. If the <b>Minister</b> approves the OP, the approved OP must be implemented within six (6) months of approval of the OP. The OP must include, but is not limited to:   | <ul style="list-style-type: none"> <li>• The Fine-grained Sediment Offset Plan was submitted to DCCEEW for approval on 24 January 2022.</li> <li>• The Fine Grained Sediment Offset Plan was approved by DCCEEW on 19 November 2023.</li> <li>• GPC is currently engaged in the tender process to secure a suitable service provider for implementing the plan.</li> </ul> | Y                 |
